Jordan Rivera

Backend Engineer | Python · Django · PostgreSQL

Toronto, ON | jordan.rivera@example.com | (555) 010-0199 | linkedin.com/in/jordan-rivera-dev | github.com/jrivera-dev

SUMMARY

Backend engineer with 4+ years building Python and Django services for health tech and logistics. Cut booking API p95 latency from 900 ms to 250 ms and built a reminder pipeline that sends 150,000 messages a week and reduced clinic no-shows by 18%.

SKILLS

Languages: Python, SQL, TypeScript, JavaScript

Frameworks: Django, Django REST Framework, Celery, FastAPI, React.js

Data & Infra: PostgreSQL, MySQL, Redis, Docker, Amazon Web Services (AWS: ECS, RDS, S3)

Practices: CI/CD with GitHub Actions, automated testing with pytest, zero-downtime database migrations, on-call and runbooks, mentoring

EXPERIENCE

Software Engineer · Northwind Health · Remote *Mar 2024 – Present*

- Cut p95 latency of the appointment booking API from 900 ms to 250 ms by adding Redis caching for clinic availability and removing three N+1 queries in the Django ORM.
- Built the appointment reminder pipeline on Celery and Redis, sending ~150,000 SMS and email reminders a week; clinics reported 18% fewer no-shows in the first quarter after launch.
- Co-led the zero-downtime migration of the appointment service from MySQL to PostgreSQL with one other engineer, writing the cutover plan and the dual-write and backfill scripts.
- Supported a booking platform used by ~300 clinics, joining the on-call rotation and writing 6 runbooks for the booking service.
- Mentored 2 engineering interns through their projects; one received a return offer.
- Built internal tools in TypeScript for the support team.

Junior Software Engineer · Brightpath Logistics · Toronto, ON *Jul 2022 – Feb 2024*

- Built a carrier webhook integration processing ~40,000 tracking events a day, with idempotent handling and automatic retries.
- Raised test coverage of the tracking service from 35% to 80% by writing its pytest suite.
- Cut release time from ~2 hours to 15 minutes by moving deployments from manual scripts to GitHub Actions.
- Built Django REST Framework APIs for shipment tracking used by the customer portal.

Software Engineering Intern · Brightpath Logistics · Toronto, ON *May 2021 – Aug 2021*

- Built an internal React.js dashboard that showed the operations team late shipments.

PROJECTS

Transit Delay Bot · Python, FastAPI, PostgreSQL · github.com/jrivera-dev/transit-delay-bot

- Telegram bot that posts transit delays for subscribed routes, used by ~1,100 people.

EDUCATION

B.Sc. Computer Science · Lakeshore University · Toronto, ON *2022*
